

PSS 5000 Forecourt Controller Training & Workshops

For efficiency and confidence in forecourt automation

Targeted Training

Doms training is tailored to meet the needs of PSS 5000 users, and is divided into:

Standard Developer Training

This is specifically designed for software engineers who plan to develop systems, typically Point-Of-Sale (POS) & Head Office systems, that use the PSS 5000. This course focuses on:

- System architecture for forecourt automation
- Business logic associated with the forecourt devices; primarily dispensers, price poles and tank gauges, but also payment terminals
- Configuration of PSS 5000 (both hardware and software)
- Control of the forecourt using PSS 5000 commands (authorization, shift-change, etc.)
- Special W&M (MID/OIML) relevant functions
- Remote monitoring
- Documentation & tools

After this course you will have a broad knowledge of what forecourt automation entails, the functionality of the PSS 5000 and how to interact with Doms during project phases.

Standard Service Training

This is aimed at service technicians who are responsible for installation and maintenance of the PSS 5000. This course focuses on:

- Installation & Configuration
- Connectivity with forecourt devices
- Troubleshooting
- Hands-on experience under expert guidance in our extensively equipped laboratory facilities
- Documentation & tools available

Specialized Training and Workshops

This comprises supplementary training and design workshops that are aimed at persons who already have a basic knowledge but require more detailed information in specific areas. The content of this training is tailored to the needs of the participants and their organization.

This course makes full use of the depth of knowledge and experience amassed at Doms over the past 30 years from more than 75 countries.

Hands-on Sessions

Each of the course types includes a hands-on session that provides access to our extensive laboratory facilities, where it is possible to gain hands-on experience in a controlled environment.

With forecourt devices from all over the world available and expert guidance on hand, you are encouraged to challenge yourself and your ability by experiencing new situations.

As part of our Software Development Kit (SDK), we include 20 hours of free support. In connection with training, we invite you to extend your stay at Doms and work in our facilities. Here you have the opportunity to start your development and, if necessary, draw on our expertise in a relaxed and informal environment.

This results in you being comfortable with the PSS 5000 (as well as forecourt automation) and means that subsequently when approaching everyday tasks in the field, you are more confident, less likely to make mistakes and more efficient.

Features

- Discover best practices for implementing forecourt control with the PSS 5000
- Learn about the automation system architecture
- Understand the functionality in the PSS 5000
- Obtain hands-on experience under expert guidance
- Introduction to documentation & tools

Benefits

- Greater understanding of forecourt control
- Better utilization of the PSS 5000; giving you a reliable forecourt, high uptime & a robust implementation
- More effective use of your time
- More confidence when using the PSS 5000
- Personal relationship with Doms team

Flexibility

Typically, our training takes place in small groups with persons from the same organization. Because of the interaction possible between the participants and the presenters, the courses can be adapted to suit the individuals' needs and focus on areas of interest.
