

PSS 5000 Forecourt Controller Training & Workshops

For efficiency and confidence in forecourt automation

Targeted Training

Doms training is tailored to meet the needs of PSS 5000 users and is divided into:

Standard Online Developer Training

This is specifically designed for software engineers who plan to develop systems, typically Point-Of-Sale (POS) & Head Office systems, that use the PSS 5000. This course focuses on:

- System architecture for forecourt automation
- Business logic associated with the forecourt devices; primarily dispensers, price poles and tank gauges, but also payment terminals
- Configuration of PSS 5000 (both hardware and software)
- Control of the forecourt using PSS 5000 commands (authorization, shift-change, etc.)
- Special W&M (MID/OIML) relevant functions
- Remote monitoring
- Documentation & tools

For more information, see the document 806350/- (<https://downloadcenter.doms.com>)

Standard Online Service Training

This is aimed at service technicians who are responsible for installation and maintenance of the PSS 5000. This course focuses on:

- Installation & Configuration
- Connectivity with forecourt devices
- Troubleshooting
- Hands-on experience under expert guidance
- Documentation & tools

For more information, see 806351/- (<https://downloadcenter.doms.com>)

After our standard online courses, you will have a broad knowledge of what forecourt automation entails, the functionality of the PSS 5000 and how to interact with DOMS during the respective project phases.

Specialized Classroom-lead Training and Workshops

In addition to our standard training sessions, it is also possible to order supplementary classroom-led, specialized training. This is aimed at persons who have already completed the relevant online training but want to dive deeper into specific areas of the PSS 5000.

This type of training is hosted at DOMS' headquarters in Denmark. It is tailored to the needs of the participants and their organization, and makes use of our extensive laboratory facilities to hold workshops that make it possible for you to gain hands-on experience and challenge yourself in a controlled environment.

These sessions make full use of the depth of knowledge and experience amassed at Doms over the past 30 years from more than 75 countries.

Support Services

The Software Development Kit (SDK) includes 20 hours of free support. In connection with our onsite workshops, you have the opportunity to start your development and, if necessary, draw on our expertise in a relaxed and informal environment. This results in you being comfortable with the PSS 5000 and means that you are more confident when approaching everyday tasks in the field, less likely to make mistakes and subsequently more efficient.

Features

- Discover best practices for implementing forecourt control with the PSS 5000
- Learn about the automation system architecture
- Understand the functionality in the PSS 5000
- Obtain hands-on experience using our bespoke training materials
- Introduction to documentation & tools

Benefits

- Greater understanding of forecourt control
- Better utilization of the PSS 5000; giving you a reliable forecourt, high uptime & a robust implementation
- More effective use of your time
- More confidence when using the PSS 5000
- Personal relationship with Doms team

Flexibility

Typically, our workshops take place in small groups with persons from the same organization. Because of the interaction possible between the participants and the presenters, the courses can be adapted to suit the individuals' needs and focus on areas of interest.
